Definitions of Terms

APCM (Actual postconsumer material) - weight of postconsumer material used in a feedstock to manufacture trash bags.

Plastic Trash Bag - a bag that is manufactured for intended use as a container to hold, store, or transport materials to be discarded, composted, or recycled, including, but not limited to, garbage bags, composting bags, lawn and leaf bags, can-liner bags, kitchen bags, compactor bags, and recycling bags.

Regulated Bag - a plastic trash bag of 0.70 mil or greater thickness that is intended for sale in the state.

RPPCM (Recycled plastic postconsumer material) - a plastic feedstock which is used to manufacture trashbags which contain postconsumer material. RPPCM may contain any amount (1 - 100%) of postconsumer material; however, compliance will be determined based on the APCM content of the trash bag.

Proximate Prior Usage of RPPCM - the collected finished product from which the postconsumer material was derived prior to being processed into RPPCM for use in the regulated bag.

Note

Until January 1, 2001, for each pound of RPPCM purchased from a source of RPPCM in California for use in the manufacture of plastic trash bags, or other products manufactured with recycled postconsumer material, the CIWMB will credit the manufacturer with having used 1.2 pounds of RPPCM toward compliance with the requirements.
